

I wish to indicate my strong opposition to the BPL proposal currently under consideration. I operate HF amateur radio in a residential neighborhood and have carefully evaluated the interference studies conducted. I have come to the conclusion that BPL signals will produce harmful interference to weak and moderate strength HF amateur radio signals, possibly making communications useless.

I am an experienced RF engineer with 31 years of industry experience, mainly in the RFI field. In my professional opinion adopting this technology will very seriously endanger HF communication (to say nothing of HF shortwave listening) in populated neighborhoods.

Yours truly Jeffrey Stricker W9GY
